

Making British gardens great

**F**

ISSUE: 0123

FIXING PACK CODE: MSFP6

8x10, 8x12, 10x10 - TRUSS FIXING PACK CODES:

STPK27(QTY 1) & MSUBPK2(QTY 1)

10x15 - TRUSS FIXING PACK CODES:

STPK27(QTY 2) & MSUBPK2(QTY 2)

10x20 - TRUSS FIXING PACK CODES:

STPK27(QTY 3) & MSUBPK2(QTY 3)

Thank you for purchasing your shed from Forest Garden. No matter what size garden, a shed is the most practical of garden structures. Simply follow these step by step instructions and our top tips and you'll be enjoying your shed for many years to come. If you have any questions or need advice, our friendly team is here to help.

# SHED INSTRUCTIONS

## WORKSHOPS (8x10, 8x12, 10x10, 10x15, 10x20)

### FIXING PACKS CONTAIN:

MSFP6 - GENERAL FIXINGS    MSUBPK2 - EXTRA U-BRACKETS

STPK27 - TRUSS FIXINGS

**Missing something or need more information?**

0333 321 3142

**Visit our website for spare instructions and more information**

[www.forestgarden.co.uk](http://www.forestgarden.co.uk)

Forest Garden, Oak Drive, Hartlebury Trading Estate, Hartlebury, Worcestershire, DY10 4JB

EU Authorised Representative: Authorised Representative Service, 77 Camden Street Lower Dublin, D02 XE80, Ireland

## BEFORE YOU START

Please read through these instructions to familiarise yourself with your shed. We recommend that you **check all the components** using the lists found on the front and back pages before you start to build.

All of our sheds are constructed in the same way. They simply come with different components depending on the type of shed you have. Don't worry if your fixing pack contains some spare items at the end of the build (you haven't missed a bit!) we have sent you a generic fixing pack to suit the shed range.

## BASE PREPARATION

It is vital that you build your new shed on a **solid, level base**. Timber or Plastic Shed Bases are ideal, as is solid concrete or concrete slabs.

**Timber Base**  
Self-constructed/  
Buy pre-made

**Concrete**  
Concrete surface/  
Concrete slabs

**Pro Shed Base**  
Interlocking  
eco-friendly base

**Broken Slabs/Gaps**  
Uneven slab sizes  
with no cement

**Soil**  
A base of soil or  
grass only

If you have an existing base and think it is suitable for your new shed to be sited on, it is important you check that it is level and does not deviate by any more than 15mm from edge to edge. If this is not the case the building will twist, causing gaps to appear in the sections and the roof, doors, and windows to misalign.

There is more information on base preparation on our website [www.forestgarden.co.uk](http://www.forestgarden.co.uk)

## TOOLS NEEDED

We recommend using the following tools (not supplied):

Tape Measure

Sharp Knife

Pozidrive  
Screwdriver

Drill & 2-6mm  
Drill Bits

Hammer

Ladder

Spirit Level

We recommend getting everything aligned properly before screwing together and that the **screw holes are pre-drilled** at this stage to **avoid splitting the timber**. We do not provide pre-drilled holes due to the nature of expanding and shrinking timber, which can cause pre-drilled holes to misalign.

**IMPORTANT**  
Assembly requires 2+  
adults.

**REMINDER**  
Always pre-drill before  
screwing.

PLEASE KEEP PLASTIC BAGS AND SMALL PARTS AWAY FROM CHILDREN  
CHECK AND TIGHTEN ALL THE FIXINGS APPLIED TO THIS PRODUCT ON A REGULAR BASIS

## CARE & ATTENTION

To help you get the most out of our products it is useful to know a little more about the properties of timber, what is normal and how your shed may behave as the seasons change. Wood is an extremely durable material for construction but as a natural product when used outdoors it is susceptible to changes in the environment.

### THINGS THAT YOU MIGHT SEE IN YOUR PRODUCT

#### MOVEMENT, TWISTING & WARPING

Wood contains a natural level of moisture so decreasing humidity levels in the surrounding air may cause panels to change their shape as the porous fibres shrink. This can be exaggerated during prolonged periods of dry weather. Movement and gaps in timber products are normal, in most cases the wood will revert to its original form once the high temperatures subside and there is more moisture content in the air. Similarly, in the winter months, the opposite may occur with wood swelling.

#### EXPANSION, CONTRACTION, SPLITS & CRACKS

All timber will expand and contract according to its environment. As a result of this expansion and contraction, it is very common to see splits and cracks developing in the wood. Splits are common during the spring and summer months as the wood begins to dry out. The outer surface dries first and contracts, contracting over a still expanded core of the wood. The result of this is that splits and cracks appear along the grain of wood. These splits are not a fault and do not affect the structural integrity of a product.

#### MOULD & BLUE STAIN

Mould is a surface-dwelling fungus that feeds on the nutrients and debris contained in the surface cells of timber. The most common problems associated with mould are discoloured timber and an increase in permeability of the timber. Blue stain is part of the same family but penetrates deeper into the surface layers of the timber. It stains the timber a dark blue, whereas mould is usually black. These do not cause the timber to rot. Keep the building well ventilated to avoid mould.

#### ADVICE ON FELT HANDLING & USAGE

Roofing felt is flexible at temperatures above 5°C. In cold temperatures extra care must be taken when handling and installing to prevent cracking and damage to the felt. The felt should not be rolled, folded, or used in temperatures lower than 5° C. In cold temperatures the felt should be stored above 10°C (indoors) for 24 hours prior to use. Felt must be lifted, not dragged, and should be stored on its end on a dry surface.

### 8 TOP TIPS TO ENSURE YOUR SHED IS FULLY WATERPROOF

- 1 POSITION YOUR SHED IN THE BEST LOCATION IN YOUR GARDEN**  
Avoid areas where water pools and which are constantly wet. Position away from trees and cut back any overhanging foliage which can cause moisture to be trapped against the walls and debris to collect on the roof.
- 2 RAISE YOUR SHED OFF THE GROUND**  
Ideally, any concrete base should be the same footprint as the shed to allow surface water to run off without pooling. A timber base can also be used. Raise your shed 50mm above ground level.
- 3 SEAL THE BEARERS**  
If using a wooden base, we recommend treating it with a treatment containing wax or oil. Also coat the bearers that meet the ground to prevent moisture rising.
- 4 USE AN END-GRAIN PROTECTOR**  
To protect the corners and panel joins, an end grain protector can be applied.
- 5 SEAL THE PANELS & WINDOWS**  
Use a flexible silicone sealant around windows to prevent water ingress. This can also be used where two sections of the shed join together. Apply internally.
- 6 CONSIDER ADDING GUTTERS**  
Adding guttering around the fascia of the shed will redirect rainwater away from the shed's foundation.
- 7 KEEP VENTILATED**  
Good airflow around the perimeter of the shed and regular ventilation inside the shed will help prevent mould and mildew.
- 8 CONSIDER A WATER SEALANT**  
You may want to consider painting your shed with a water sealant at least once a year. This will help reduce the risk of water ingress. We would recommend using 'Bostik Cementone Water Seal' of which can be purchased from multiple DIY stores.

## HEALTH & SAFETY

We strongly recommend that PPE (Personal Protective Equipment) is used throughout your build to ensure you are protected from any potential health and safety risks. **Do not exempt yourself from wearing PPE.**

Cut-Resistant  
Gloves

Protective Glasses

Protective Boots

Protective Mask

Working At  
Height

### THE ROOF OF THIS BUILDING IS NOT A LOAD BEARING STRUCTURE

The components provided may be heavy. Please lift with caution and with a minimum of 2 people. Please carefully unpack your shed and loose components as they may have moved during transportation.

## TREATMENT INFORMATION

The treatment applied to your shed is to ensure longevity and protection against fungal decay and rot. This may leave colour variations, but these will even out as the moisture content stabilises.

Dip Treatment	Pressure Treatment
Dip treatment is to provide protection against fungal decay	Pressure treatment is to provide protection against rot
Dip treated sheds <b>MUST</b> be re-treated every year	Pressure treated sheds <b>do not</b> need to be re-treated every year
10 year guarantee	25 year guarantee

Use the 'waterproofing top tips' to increase the longevity of your shed.  
See our website for more information at [www.forestgarden.co.uk /guide-to-our-products/](http://www.forestgarden.co.uk/guide-to-our-products/)

**Treated timber contains biocidal products for control of wood destroying organisms.**

**Active Ingredients** - Propiconazole, Tebuconazole, IPBC, Permethrin, Benzyl-C12-16-Alkyldimethyl Chlorides. (Dip Treated Sheds)

Basic Copper Carbonate, DDA Carbonate, DDA Chloride. (Pressure Treated Sheds)

- Wear gloves when handling.
- Avoid inhalation of sawdust.
- Do not use in contact with drinking water or food.
- Do not use for animal bedding or in fish ponds.
- Dispose of treated wood responsibly.

## DISCLAIMER

**Check you have all your parts prior to assembly.**

Timber is a natural material of which will shrink and swell because of varying moisture content.

Assembly of damaged parts may be deemed to be acceptance, and this may affect the remedies you are entitled to.

If the product is not constructed in accordance with the instructions, or is altered in anyway (e.g. painted), the manufacturer cannot be held liable for any resulting damage.

If you are organising a third party to install your shed, it is best not to schedule this immediately on receipt of your order, to give you time to check your delivery.

# IDENTIFY YOUR SHED

5

From the **floor plans** below, identify your shed based on the **width, depth and shed code** provided. You will need this to identify the side panel positions before assembling your shed. Use the key as a guide.

Assembly of your chosen shed will slightly differ throughout the steps based on the size of your shed. This will be mentioned throughout the instructions for guidance.

## KEY

**A** 1ft Panel (295 x 1603mm)

**D** 3ft Panel (885 x 1603mm)  
(With & without windows)

**B** 1.5ft Panel (442 x 1603mm)

**E** 4ft Panel (1180 x 1603mm)  
(With & without windows)

**C** 2ft Panel (590 x 1603mm)

### PLEASE NOTE

The sheds are made up of multiple sections where same size panels are interchangeable.

Indicates the panel orientation during construction.  
This will apply to all of the corners for your chosen shed.

# 1 CONSTRUCTION

## 1a FLOORS & SIDES

Position the floors in your desired location. Follow the step provided based on your type of shed to piece the floors together as shown below. Use your section layout on pages 5-6, which shows the amount of floors for your chosen shed.

Layout the panels around your shed base.

We recommend to start in a back corner then work from the back panels to the front panels for assembly.

## 1b

Start at a back corner. See the section layout on pages 5-6 to confirm position. Secure the corner as shown below.

Repeat the process for remaining panels and secure panels together. Make sure that the bottom frame of the wall panel rests on the outer edge of the floor.

Secure the panels into place by screwing into the floor. Screw the door batten down.

EG. INSIDE CORNER

EG. SIDES

EG. INTO FLOOR

## 1c

Attach the Back Apex Section by screwing to the wall panels. Leave the Front Apex Section off at this step. This step applies to the 8x10 and 8x12.

For the 10x10, 10x15 and 10x20, assemble the front and back Apex Sections shown below.

Once assembled, attach the Back Apex Section by screwing to the wall panels. Leave the Front Apex Section off at this step. This step applies to the 10x10, 10x15 and 10x20.

FRONT

BACK

## 2 WINDOWS

8

Fix interior sills at the base of windows with L-brackets and screws at a 1002mm distance from the floor. Repeat this for multiple windows, as shown below.

Secure windows by screwing through the window cover strips and window into the panel frame (30mm screws). Screw into the top and bottom of the window and into the interior sill to keep secure (25mm screws). Make sure the window is centralised for all window frames as shown below.

## 3 COVER AND DOOR STRIPS

Attach the cover strips onto the corners. Ensuring they are flush to the bottom edge of the panels as shown below.

Attach the cover strips onto the adjoining panels. Ensuring it is flush to the bottom edge of the panels as shown below.

Secure the door weather strips. Ensure it's flush to the floor and against the inside face of the wall panel frame as shown below.

Before attaching the doors, Screw the slamming strip onto the one door. Ensure you screw through the slamming strip into the door framework as shown below.

## 4 ROOF

4a

Assemble the truss and screw the U-brackets onto each beam. Ensure the truss support brackets are added first and flush to the edge of the central beams to establish the correct angle. Screw the battens to the beams, underneath the truss support brackets.

For the 8x10, 8x12 and 10x10 sheds, secure the support bracket hanger with screws into the center of your shed. There needs to be one at each side.

For the 10x15 and 10x20 sheds, secure the support bracket hangers with screws onto the panels of your shed with the measurements shown below. There needs to be one at each side.

## 4b

Before placing the OSB roof sheets onto the roof, **screw the roof support strips** along the edge of the OSB roof sheets. Ensuring they are flush to the edges. Add one strip onto each sheet as shown below. The strip will be the same length as one side of the sheet.

**PLEASE NOTE**

For the 10x15 & 10x20 sheds, the front and back OSB roof sheets are bigger than the ones in the centre.

For 10x10, 10x15 and 10x20 sheds, **screw the back Apex Section cover strip onto the join line**. If you are not constructing these shed sizes, skip this step.

**Screw the truss to the support bracket hangers.**

For the 10x15 and 10x20 sheds, screw only one truss to the back support bracket hangers first.

## 4c

**PREPARATION:** Attach the Z-brackets onto the face of one end of the 12 beams as shown below. The beam should be flush to the Z-bracket.

**ATTACHMENT:** Secure the other end of the beams to the U-brackets on the truss by screwing from the underside of the beam.

**Screw the Z-brackets** that are already attached to the beams **onto the back apex section frame**. This will apply to all of sheds.

**Starting at the back, screw the OSB roof sheets** into position with the sheet edge onto the centre of the truss central beam, as shown below into the shed frame and truss. The 10x15 and 10x20 sheds will have slight differences in sizes, therefore use the measurements shown below.

**PLEASE NOTE**

For the 10x15 & 10x20 sheds, the front and back OSB roof sheets are bigger than the ones in the centre.

## 4d

The 10x15 and 10x20 sheds will **repeat the process** for the rest of the beams, truss and OSB roof sheets, working down to the front. Attach the beams without Z-brackets onto the U-brackets provided between each truss by screwing from the underside of the beam.

Before applying the last beams and OSB roof sheets, **attach the front apex section (assembled)**. Then **screw the cover strips** into the apex section panel join lines shown below.

Apply the final beams by **screwing the Z-brackets** that are already attached to the beams **onto the front apex section frame**.

**10X15 & 10X20 SHEDS**

Measure out 4 equal lengths and overlap it on the top, around the edges and **fold the corners; tack to keep secure**. Ensure 50mm at the bottom and work from the bottom to the top.

**TOP TIP:** Use measuring tape to measure out 4 equal lengths & cut with a sharp knife. Hammer the tacks into the felt. Add the tacks at 150mm intervals.

Secure the fascias and the finial with screws as shown below based on your chosen shed.

## 5a DOOR FIXINGS

Attach 2 hinges onto the door frame with the measurements provided. Please take note of the hinge position shown below. Repeat this on the other door.

Place the door into the opening, ensuring it's level. Make sure the hinges are up against the door weather strip face. Repeat this with the other door.

Fix the Hasp and Staple as shown. Ensure the screws go into the framework behind.

Make sure the outer face of the notch on the hinge is in line with the door face.

## 5b

Fix the turn buttons as shown below. Screw one turn button at the top and at the bottom of the slamming strip. Screw into the slamming strip, ensuring it overlaps the frame.

Fix the turn button as shown below. Screw one turn button into the Apex Section, ensuring it overlaps the door. Make sure you screw the turn button above the door that does not have the slamming strip attached to it.

# PRESSURE TREATED OVERLAP APEX SHEDS
